

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A hydraulic device adapted for use to be operated while being ~~when~~ suspended from a crane, said device comprising:

a body portion adapted for suspension from the crane;

a cylinder for holding hydraulic fluid connected to the body portion;

at least a first member connected to the body portion and the cylinder and movable by hydraulic pressure applied to the cylinder;

a pump connected to the cylinder for pumping pressurized fluid to the cylinder;

a power source for providing power to the pump;

a controller connected to the body portion and electrically connected to the pump, the controller including a receiver for receiving a control signal and transmitting power from the power source to the pump based on the control signal, and a manually operated control switch located at the body portion for transmitting power from the power source to the pump; and

a transmitter for remotely transmitting the control signal to the receiver to operate the pump when the hydraulic device is suspended from the crane;
and

wherein the device is a hydraulic dumpster, the first member is a door on the dumpster, and the cylinder is pressurized to open the door.

2. (Original) The device of claim 1, further comprising:
an enclosure containing the pump, controller and power source; and
a mount connected to an exterior side of the enclosure and body portion,
the mount having a planar portion with two rails extending away from the
enclosure and forming a connection between the enclosure and body portion.

3. (Original) The device of claim 1, further comprising:
a valve for controlling the direction of flow of fluid between the cylinder
and pump, wherein the receiver transmits current to the valve to operate the
valve.

4. (Canceled)

5. (Currently Amended) The device of claim ~~1~~ 2, wherein the
enclosure is made of a metal.

6. (Canceled)

7. (Original) The device of claim 1, wherein the pump is a hydraulic
pump including a tank and a motor.

8. (Currently Amended) A hydraulic system adapted to operate a device while suspended from a crane, said system comprising:

a pump for pumping fluid to a hydraulic cylinder on the device suspended from the crane;

a power source for providing power to the pump;

a controller electrically connected to the pump and including a receiver for receiving a control signal for controlling the transmission of power to the pump, and a manually operated control switch located at the device suspended from the crane for transmitting power from the power source to the pump independently of transmission of power based on the control signal; and

a transmitter for remotely transmitting the control signal to the receiver to operate the pump while the hydraulic system is suspended from the crane; and

wherein the device is a hydraulic dumpster, a door is located on the dumpster, and the hydraulic cylinder is pressurized to open the door.

9. (Original) The system of claim 8, further comprising:

an enclosure containing the pump, controller and power source; and

a mount connected to an exterior side of the enclosure and for connecting the enclosure to the device, the mount having a planar portion with two rails extending away from the enclosure and forming a point of connection between the enclosure, and a second portion.

10. (Original) The system of claim 8, further comprising:
a valve for controlling the direction of flow of fluid between the cylinder and pump, wherein the receiver transmits current to the valve to operate the valve.

11. (Currently Amended) The system of claim 8 9, wherein the enclosure is made of a metal.

12. (Original) The system of claim 8, wherein the cylinder opens and closes a door on the device.

13-20. (Canceled)

21. (Previously Presented) The device of claim 1, wherein the manually operated control switch comprises open, closed and off positions.

22. (Previously Presented) The system of claim 8, wherein the manually operated control switch comprises open, closed and off positions.

23. (Canceled)

24. (New) The device of claim 9, wherein the rails have a U-shape.
25. (New) The device of claim 24, wherein the device has a frame and the U-shaped rails are adapted to be connected to the frame.
26. (New) The device of claim 24, wherein the frame has plural portions and the U-shaped rails are adapted to be connected to only one of the plural frame portions.
